

The resuscitator can perform massage and apply artificial respiration without the need for an air outlet or battery. The 25-litre tank uses its own power source, oxygen that it feeds the patient. The unit may be used in emergencies such as near-drowning, heart attacks and cases of unconsciousness during hot-weather holidays. It can be used on the spot or in a hospital en route to hospital. The unit is manufactured by Drägerwerk AG, Lütkefähr, West Germany.

Along with a new compact camera called the "Square Shooter" Polaroid has developed a new color film which costs only \$3.99 instead of the current \$5.49 price on colorpack film. The company reports this price is about the same as it costs to have a color print processed by conventional methods. The "Square Shooter" is priced at \$34.95 and incorporates some of the features previously available only on more expensive cameras. Polaroid Corporation, Cambridge, Mass.

Rutgers University has come up with a plastic bottle that promises to be the answer to landscape litter from cans and glass bottles. The university, located in New Brunswick, N.J., claims the bottles can be burned in an incinerator with no more pollution than from burning paper. Previous plastic containers were noted for giving off toxic gases when burned. Also the bottles can be shredded and plowed under the soil, says the food science department of the university.

An invention called an "Optophone" is allowing blind Britons to read by converting printed words into musical sounds by means of photoelectric cells. A light made up of six points moves across the lines of print at a controlled speed. As the light passes over each letter, a sound is made which represents the letter, allowing blind to read.
